

## **WEEK 9 LOG**

### **STEP 1**

**What are the details of the product that the group has chosen to continue with for this practical class?**

In the group we discussed continued with the customer detector device that will detect the customer movement in the store, and the product detector detects the products being bought in store and all the information will be updated in the database.

**What other options were discussed?**

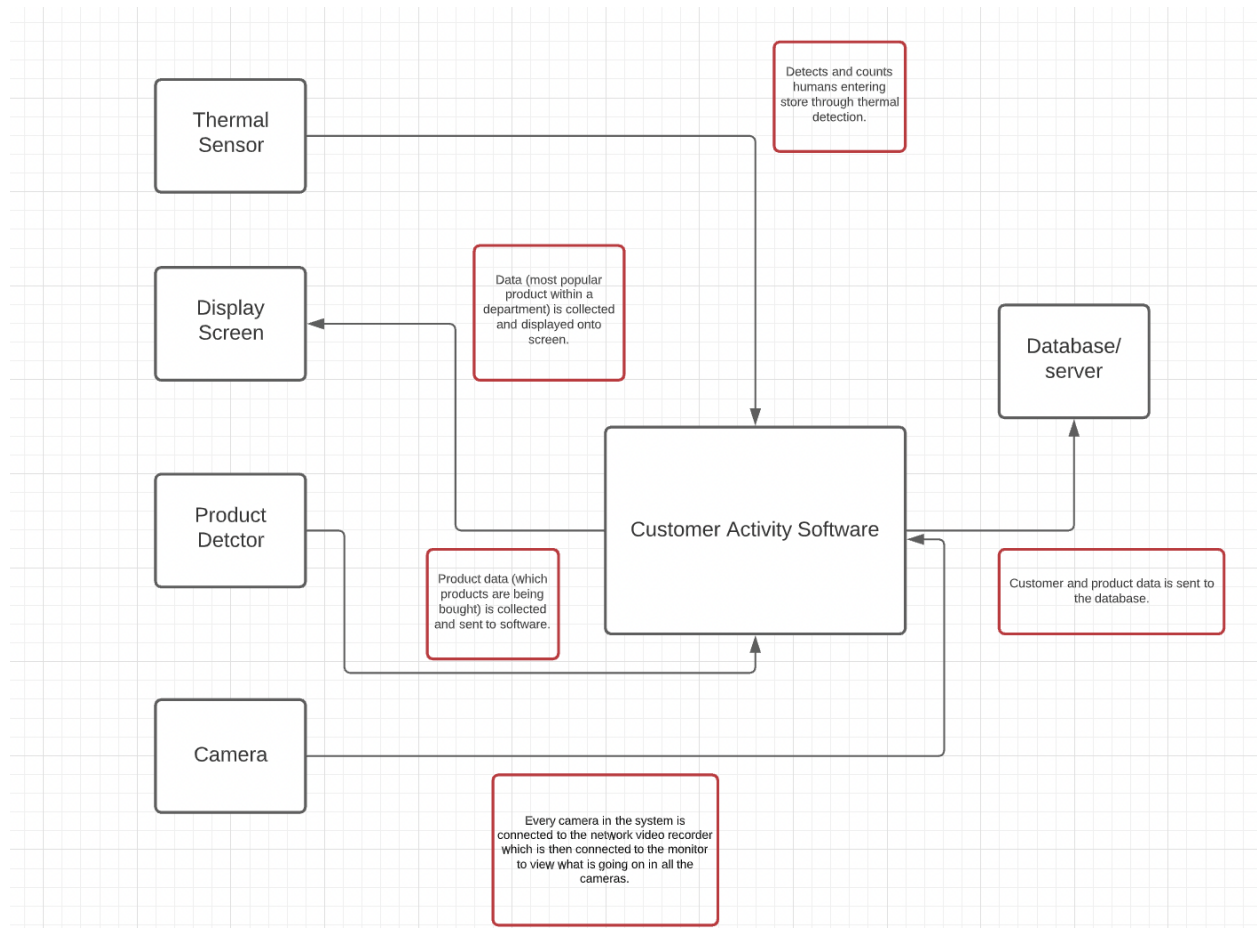

At start we were planning to use the camera to recognise the human, After further discussion, we agreed upon using a detector device to keep a track of the human activity in store.

---

## STEP 2

As a part of this step we discussed the

- We discussed the hardware components of the software
- Interaction between the components.
- Made the context level diagram.

### STEP 3

As a part of this step, we made the high level architecture.
