Week 3 —- logbook	
	- Setup Trello and lucid chart - As a part of step 6 The team leader , assigned us a card (adding the square element and labelling it) - Worked in group to make the flowchart.(made a flowchart on the game rock paper scissor) - As a part of step 7 These are the following observations made : • What tasks did you have assigned to you? —> **I was assigned a task of adding the processes in the flowchart.** • Did you need to wait for any other tasks to be completed before you could start your tasks? **—> didn't have to wait for any tasks as it was all being done together.** • Did you have anyone else in your group asking (politely or otherwise) if you had completed a certain task yet? • How could these tasks have been assigned (but still equally distributed) so that the project could run faster? • Would any more information at the beginning of the project been useful for you or the team? —> **having the algorithm discussed at start would have been useful.** • What would your team do differently to better do a project like this if you were assigned a similar one in future weeks? • When doing project task allocations in other units, do you think it is important to look at the task dependencies when allocating them and scheduling them? Why? How could team member availabilities and workloads affect this? **—> it is important to have a look at the task dependencies tag first , so that the task can be done accordingly.**
