Week 5 —- logbook	
	- We first set up GitHub for group project - The group leader then created a shared group repository and Trello board and also shared the google drive. - We Opened the shared group git repo , Trello , google drive. - After which we Cloned the group repository to our local machine - In the task 1d the group leader added the files - After which I did git pull to get those files - TASK 2: for this task we worked in group to solve the questions in the challenge in the code section "data loading". - Tried to analyse the data file.
